Activity 4: Application Development - Web Platforms

Instructions

What to Build

Build a single-page personal portfolio website using **HTML, CSS, and JavaScript**. All four required sections must be visible in a browser. Submit your code through a GitHub repository link.

Required Sections

Your portfolio must contain the following four sections:

1. **Header / Navigation** — your name as a brand and anchor links to each section.
2. **Hero / About Me** — your photo, a short introduction, and a brief bio.
3. **Projects** — at least two project cards (real or sample work).
4. **Footer / Contact** — email, GitHub link, and/or social media handles.

Technical Requirements

HTML. Use semantic tags (<header>, <nav>, <main>, <section>, <footer>), include the viewport meta tag, and provide alt attributes on all images.

CSS. Use a separate style.css file with no inline styles. Use Flexbox or Grid for layout, include at least one @media query, and make the page responsive on mobile.

JavaScript. Use a separate script.js file with at least one working interactive feature. All code must be commented.

JavaScript Feature (Choose One)

- **Hamburger menu** — shows and hides the navigation on mobile.
- **Smooth scroll** — anchor links scroll the page smoothly.
- **Dark/light mode** — a toggle button switches the color theme.
- **Form validation** — checks that fields are filled and the email format is valid.

Bonus (+5 pts)

Deploy your site using **GitHub Pages** and submit the live URL. The site must be publicly accessible via HTTPS (e.g., https://your-username.github.io/portfolio/). All CSS, JS, and images must load correctly on the live version.

Deliverables

Submit the following items. Each entry states what is required and where it must be submitted.

1. **index.html.** Main HTML file with all four sections using semantic HTML5 tags. It must be named exactly index.html. *Where to submit: Inside the GitHub repository.*
2. **style.css.** Separate CSS file containing the layout (Flexbox/Grid), color scheme, hover effects, and at least one @media query. *Where to submit: Inside the GitHub repository.*
3. **script.js.** Separate JavaScript file with at least one working interactive feature. All functions must be commented. *Where to submit: Inside the GitHub repository.*
4. **GitHub Repository Link.** A public repository containing all three files. It must be set to Public so the instructor can view the code. *Where to submit: Paste the link in MS Teams.*
5. **Deployed Site URL (Bonus).** Live version through GitHub Pages (HTTPS). All CSS, JS, and images must load correctly. This earns +3 bonus points. *Where to submit: Paste the live URL in MS Teams.*

Scoring Summary

Base score: **25 pts**. Bonus (deployed site): **+5 pts**. Maximum total: **30 pts**.

Analytical Scoring Rubric

Criterion	Weight	Excellent	Proficient	Developing	Beginning	Score
HTML Structure & Semantics *Proper use of HTML5 semantic elements and document structure.*	**20%**	**5 pts** All four sections present. Correct semantic tags throughout. Viewport meta included. All images have alt text. Code is cleanly indented.	**3–4 pts** All sections present. Minor misuse of semantic tags. Viewport meta present. Most images have alt text.	**2 pts** Two or three sections. Heavy use of div tags. Viewport meta or alt text may be missing.	**1 pt** One section or incomplete page. No semantic tags. Broken links or missing doctype/viewport.	_____
CSS Styling & Responsiveness *Visual design, layout technique, and mobile responsiveness.*	**25%**	**6–7 pts** Consistent color scheme and typography. Flexbox or Grid used. Looks good on desktop and mobile. At least one @media query. Hover effects. No overflow.	**4–5 pts** Reasonable design with minor issues. Flexbox/Grid used in at least one section. Partially responsive. Minor overflow on small screens.	**2–3 pts** Basic styling only. Not responsive. Elements overflow on mobile. No @media queries. CSS disorganized or inline.	**1 pt** Little or no CSS. Default browser styles. Content unreadable. No responsive design attempted.	_____
JavaScript Interactivity *At least one working feature implemented in a separate .js file.*	**20%**	**5 pts** Feature works correctly. JavaScript in a separate file. Code is clean, commented, and meaningful.	**3–4 pts** Feature mostly works with minor bugs. JavaScript is mostly in a separate file with some inline fragments.	**2 pts** JavaScript attempted but feature has noticeable bugs or partially works. Code may be fully inline.	**1 pt** No JavaScript, or script causes console errors. Feature does not function at all.	_____
Code Quality & Organization *Files properly separated, code readable, and comments present.*	**20%**	**5 pts** Three separate files. Consistently indented and readable. JavaScript is commented. Meaningful variable and class names throughout.	**3–4 pts** Three files present. Mostly readable with minor indentation or naming inconsistencies. Some comments in JavaScript.	**2 pts** Some CSS or JS may be inline. Hard to follow due to inconsistent indentation or absence of comments.	**1 pt** All code in one file or files not correctly linked. No indentation or comments. Very difficult to read.	_____
Content Completeness *All required sections present with real, personalized content.*	**15%**	**3–4 pts** All four sections have real, personalized content. Project cards have titles and descriptions. Contact has a working link.	**2 pts** All four sections present but some have placeholder text. At least two sections have meaningful personal content.	**1 pt** Only two or three sections. Most content is placeholder. Projects section is empty or missing.	**0 pts** One section or essentially blank. No personal content beyond the default template.	_____
Total (Base Score)	**100%**	**25 Points**				**__ / 25**
Deployment via GitHub Pages *Site live via HTTPS, all assets loading correctly.*	**+5**	**Full Bonus (+3)** Live URL works. All CSS, JS, and images load correctly. URL is in the expected GitHub Pages format. Both repository and live link submitted.	**Partial (+1–2)** Site is deployed but some assets fail to load due to file path issues. URL is accessible.	**Attempted (+0)** GitHub Pages was enabled but the URL returns a 404 or the site does not render correctly.	**Not Submitted (0)** No deployed link submitted.	**__ / 5**
Total		**25 pts base + up to 5 bonus pts = 30 pts maximum**				**__ / 30**
